MULVANE VISION CARE
FEBRUARY, 2004

ARE YOUR CONTACT LENSES DRY?

A new study confirms new contact lens materials are better for dry eye conditions. A study by the Hydrogel Vision Corp. concluded that dry eye symptoms can be alleviated to a great degree by using the Extreme H2O lens or the Proclear contact lens material. We have both of these in stock. Ask Renee to test drive a pair (777-0022).

THE BEST SUNGLASSES MADE ARE HERE AT MULVANE VISION CARE.

MAUI JIM sunglasses were developed in Hawaii to protect the eyes from the harsh tropical sun. You have to try a pair on to believe the comfort. Ask to try on a pair of the titanium or plastic sport wrap - around glasses.

BUY ONE PAIR OF MAUI JIMS AND GET A PAIR OF EYE SCREAM SHADES FOR YOUR SON OR DAUGHTER AT HALF PRICE.

During February and March when purchasing a pair of Maui Jim sunglasses you will get a pair of EYE SCREAM SHADES for kids at 50% off.

ARE YOU BOTHERED BY REFLECTION AND GLARE?

You don't have to be. Driving at night, working on a computer, watching a basketball game, and experiencing glare and reflection? This can be eliminated with the CRIZAL anti-reflective coating. An AR coating allows for all light to be transmitted through the lens, no light is reflected. See the difference for yourself.

DR. CLINE IS OFTEN ASKED WHEN SHOULD I HAVE MY CHILD EXAMINED?

Many are surprised when I say 6 months of age. Now that we know vision and the visual system are learned and not a given at birth it becomes more important to have your infant examined. We start seeing infants at age months, age 3 and then age 5 (before kindergarten) and every year after this. Protect the most precious gift we have been given.....Vision.
